## **Local Solar Company Expands into Texas**

Compass Solar Energy based in Pensacola has expanded into the Texas market. "We are in the beginning of a major shift for the energy sector and as a result new markets are opening up daily" says Dan Gardner, Vice President of Business Development. The Federal sector represents a large portion of that new market. Compass Solar Energy just recently completed Phase I of a multiphase project with the installation of a 120,000watt Solar Electric System at Ft. Bliss Army base in El Paso, Texas. "Large projects like this allow us opportunity to enter new markets." Dan said. "These large projects provide the springboard for entry into the private business and residential sector within new markets".

Here locally Compass Solar Energy has recently completed several large projects; a solar thermal project on NAS Whiting Field and on Midtown Dental, a Pensacola Dental Practice located behind Barnes and Nobles, a 12,880 watt solar energy system. Late last year Compass Solar Energy completed a 17,000 watt Solar Electric and Solar Hot Water System at the Dauphin Island Sea Lab. "It's ironic that within a year after this "Green" facility is constructed it plays a vital role in our Gulf Oil Crisis."

Continued growth is expected as utility consumers learn of the lower solar prices and continue to experience higher utility costs.

**About Compass Solar Energy;** Provider of Engineering, Design, Sales and Installation of Small to Large Scale Solar systems for Pools, Domestic Hot Water and Electric Energy needs. Currently covers Northwest Florida, Southern Alabama, Southern Georgia, Southern Mississippi and now West Texas.
